

Supplement to Facilitated Learning Through Interdisciplinary Undergraduate Research Involving Retrospective Epidemiological Studies and Memories of Older Adults

Teri Shors and Susan H. McFadden

**Table 1: Department affiliations of faculty, courses, and research methodologies for The Flu Project.**

<b>Department</b>	<b>Course</b>	<b>Research Methodology and Focus</b>
Biology and Microbiology	Virology	Epidemiological study of death records and public health reports
Biology and Microbiology	Biology or Microbiology Independent Study Projects	Medicines and remedies used to treat or prevent influenza; 1919-1920 influenza study
Anthropology and Religious Studies	Archeological Methods	Cemetery field survey to study American mourning practices
Psychology	Adult Development and Aging	Qualitative research using semi- and aging structured interviews to reveal memories of coping and effects on attitudes toward medical care

**Table 2: Department affiliations of faculty, courses, and research methodologies for The Polio Project.**

<b>Department</b>	<b>Course</b>	<b>Research Methodology and Focus</b>
Biology and Microbiology	Virology	Epidemiological study of death records and public health reports
Nursing	The Aging Client	Qualitative research using interviews of retired physicians and nurses who cared for Polio patients
Psychology	Adult Development and Aging	Qualitative research using semi- and aging structured interviews to reveal memories of coping and effects on attitudes toward medical care
History	Independent Study	Archival research on Polio cases, quarantines, political responses, and medical treatments in local region
Communications (Radio/TV-Film)	Independent Study	Interdisciplinary collaboration used to support the production of a documentary film about the local Polio epidemic
