Creating Time for Research

Student researcher (Andrew Green) and faculty advisor (Bill Dinklage) in Thunder Bowl, high central Wasatch Mountains in June 2003, on a six-day mapping project in the granitic Little Cottonwood Stock. Utah Valley State College and its School of Science and Health have encouraged undergraduate research with in-house funding of projects, by providing competitive stipends for summer research, and by buying release time to give faculty time to do research. (See page 172.)
